SELLER PACK

Paper Trail

Everything you need to sell the kit. Version 1.1.2 draft.

1. Selling notes Read this first
2. Test it with a friend Do this before you sell
3. Sales copy Copy and paste from here
4. Where does each paper go? For the Household Hub bundle

The app and the buyer files are in the zip. This pack is only for you.

READ THIS FIRST

Selling Paper Trail as a kit

The idea

Each buyer makes their own copy of the app inside their own Claude account. They own it, so they can save records and photos, and they use their own Claude usage for scans.

For you, that means:

- No hosting, no sign-in system, no payment setup beyond your shop.
- You never hold anyone's receipts or tax papers.
- No per-scan cost. Each buyer pays for their own.
- One file to maintain.

What's in this folder

Path	What it is
`../paper-trail.html`	The app. The only copy. Everything else points here.
`buyer/`	The files buyers get: `START-HERE.html`, `CLAUDE.md`, `PASTE-THIS-PROMPT.txt`, `TERMS.txt`, `CHANGELOG.md`.
`seller/`	You only: these notes, the sales copy, the test checklist, and the Household Hub page (`WHERE-DOES-EACH-PAPER-GO.md`).
`screens/`	App screenshots with sample data.
`mockups/`	The same screenshots as 3:4 shop images, evergreen with a phone frame.
`VERSION`	The version number.
`make-kit.sh`	Builds `dist/Paper-Trail-Kit-vX.Y.Z.zip`.

Build the zip

```
cd paper-trail/kit
./make-kit.sh --draft     # for testing; the zip name ends in -DRAFT
./make-kit.sh             # the real one
```

You can also just ask Claude Code: "Build the Paper Trail kit." It runs the same script.

The real build refuses to run until every `REVIEW-BEFORE-SELLING` line is gone. There is one now, in `buyer/TERMS.txt`. The script also stops if it finds an em dash, a model name, or an unfilled placeholder in anything a buyer reads.

Before you sell

1. Run the friend test in `TEST-WITH-A-FRIEND.md`. This is the big one.
2. Paste a few rows into your own Hub Sheet and Doc (section 9 of the friend test).
3. Have someone qualified read `buyer/TERMS.txt`. It's a plain-words draft, not legal advice. Then delete the `REVIEW-BEFORE-SELLING` line.
4. Read Anthropic's current terms for selling things people build on Claude.
5. Check which Claude plans include Claude Code and artifacts. Put it in `START-HERE.html` under "What you need."
6. Replace the staged scan screenshots with a real scan from your own copy.
7. Decide on your price and whether updates are free. `START-HERE.html` says "I'll send you a new file" when there's an update, so only keep that line if you will.
8. Pick where buyers contact you. The guides say wendaful.com.

Send an update

1. Change `../paper-trail.html`.
2. Raise the number in `VERSION`.
3. Add a new section at the top of `buyer/CHANGELOG.md`. Write the version number out, like `## Version 1.1.0`. Say whether the capabilities changed. If they did, `CLAUDE.md` and `PASTE-THIS-PROMPT.txt` need the new list too.
4. Run `./make-kit.sh`, upload the new zip to your shop, and email your buyers.

An update never touches a buyer's records. Their records live in their own artifact, and publishing to the same link keeps them.

What's tested and what isn't

Tested:

- The app works as a Claude artifact in your account. It's live and has gone through seven versions.
- 264 checks pass in a test browser: scanning, saving, editing, reminders, search, the history cards, exports, dark mode, and view-only mode. Those checks used a stand-in for Claude's features, so they prove the app's logic, not Claude's behavior.
- The publish settings in `CLAUDE.md` are the ones I used for your copy.
- The build script produces the zip and its guards trip when they should.
- **Add to Household Hub:** every column list matches a table in your real Hub Sheet or Doc, in the same order (checked against both files). Another 46 checks cover every paper type, both versions, every table choice, the Vision and Dental columns, the copy buttons, and the formula guard.

Not tested:

- Setup from a fresh Claude account.
- Which Claude plans a buyer needs.
- The camera and photo picker on a real phone, inside Claude's viewer.
- Sharing with family, and what the Share menu offers on other plans.
- How much Claude usage a scan really uses.
- Anthropic's terms on selling this.
- Pasting a Hub row into the real Sheet and Doc. The Sheet should spread it across the columns. The Doc may put it all in one cell, which is why every box has its own Copy button.

The screenshots show sample data with a made-up receipt, and the scan result came from a stand-in reader.

Support replies

Short versions you can paste and make your own.

Claude says it can't publish artifacts

> Thanks for telling me. Ask Claude: "Can you publish an artifact?" If it says no, your plan or app version may not include it yet. Tell me which Claude plan and app you're using and I'll help you figure out the next step.

The scan button says Claude wasn't allowed

> Open the page again. When it asks if Claude can read the photo, say yes. It only asks once per visit.

My photos won't save

> Only the person who published Paper Trail, and anyone invited as an Editor, can save photos. Open it from the Claude account that set it up.

I lost my link

> In Claude Code, type /artifacts and you'll see your list. You can also look at claude.ai/code/artifacts.

Can it send me alerts?

> Not yet. Reminders show under Coming up when you open the app. If you want a buzz on your phone, tap Copy reminder and paste it into your calendar or reminders app.

If you want to grow it later

The app plan I started (your own sign-in system, cloud storage, subscriptions, and scans you pay for) is parked. Nothing in the kit gets in its way. If the kit sells and people ask for it, we can pick it back up.

DO THIS BEFORE YOU SELL

Test it with a friend before you sell it

I built and tested Paper Trail in your Claude account, with a stand-in for Claude's features in a test browser. I could not try it from a fresh account, and I could not try it on a real phone. Those are the parts a buyer will hit first, so this is the test that matters.

Pick your tester

- Someone who has a Claude account and has never seen the app.
- Not very techy, if you can. They're closest to your buyer.
- Two people is better. One on the desktop app, one on a phone.

Give them the draft zip: `dist/Paper-Trail-Kit-v1.0.0-DRAFT.zip`. Don't help unless they're stuck for more than a few minutes. Write down where they got stuck.

The checklist

Mark each one pass, fail, or not sure. Write down the exact words on any error.

1. Can they publish at all?

- [ ] They ask Claude Code: *Can you publish an artifact?* What did it say?
- [ ] What Claude plan are they on? Which app (desktop, terminal, web)?
- [ ] They unzip, open the folder, type **Set up Paper Trail**. Does Claude get all the way to a link?
- [ ] How many minutes from unzip to link?
- [ ] Did Claude use the exact settings in `CLAUDE.md`? (`db`, `sample` with images, `assets`, `downloads`, `user`)

If this fails, nothing else matters yet. Find out whether it's the plan, the app version, or the instructions.

2. Does the page come up working?

- [ ] The link opens and shows the Paper Trail home screen.
- [ ] The **Take a photo** and **Pick photos** buttons are there. If they're replaced by a message about opening from Claude, write it down.
- [ ] The first scan asks them to let Claude read the photo. They say yes.

3. The phone (the biggest unknown)

- [ ] They open the link on a phone. In the Claude app, or in a browser? Write which.
- [ ] Does **Take a photo** open the camera? On iPhone? On Android?
- [ ] Does **Pick photos** open the photo library?
- [ ] Does a real receipt get read? How long did it take?
- [ ] Is the text readable and are the buttons easy to tap?

If the camera doesn't open from inside Claude's viewer, tell me. The sales page can't say "take a photo" until we know, and I'd change the home screen.

4. Saving and finding

- [ ] Save a record. Close the page. Open it again. Is the record still there?
- [ ] Open it on a second device. Same records?
- [ ] Does the photo show on the record?
- [ ] Search, filter by type, open a record, tap Edit, change something, save.
- [ ] Add a reminder for a booked appointment. Does it show under Coming up?
- [ ] Save as a spreadsheet. Does the file arrive?

5. Family

- [ ] In Claude's Share menu, what choices does their plan show?
- [ ] Can they invite someone by email as an Editor?
- [ ] Can the invited person see the records, add a record, and save a photo?

START-HERE.html says "your plan decides what the menu offers." If you find out more, make it specific.

6. Updating

- [ ] Change one word in the app file. Replace it in the folder. Type **Update Paper Trail with the new file**.
- [ ] Same link? Records still there?

7. Cost

- [ ] Do ten scans. How much of their Claude usage did that take? (Look at the usage meter before and after.)

- [ ] Did they hit any limit?

This tells you what to say on the sales page about "uses your own Claude usage."

8. You

- [ ] Read Anthropic's current terms for anything you sell that people build on Claude. Anything that stops you selling it, or needs a line on the sales page?
- [ ] Check Claude's site for which plans include Claude Code and artifacts. Put the answer in START-HERE.html under "What you need."

9. Household Hub (you can do this one yourself)

- [ ] Open a paper's summary and open **Add to Household Hub**. Does it say the right place?
- [ ] Pick Google Sheet and tap **Copy row**. In the Hub Sheet, click the first empty cell of the vehicle service log and paste. Does the row spread across the six columns? Does the date show as a date and the cost as money?
- [ ] Do the same in the Hub Doc: click the first cell of an empty row in the Auto service table and paste. Does the row land in one cell, or spread across? If it lands in one cell, do the Copy buttons on each box work one at a time?
- [ ] Save an eye exam. In its Hub section, pick **Copy column**, then paste it into the Vision table under a person's name in the Sheet. Do the five values land next to Eye Doctor, Phone, Last Exam, Prescription, and Next Appointment? Does the Prescription box hold the prescription numbers, with the expiry date on Next Appointment? Do the same with a dentist visit and the Dental table.
- [ ] Try a pet paper, a health paper, and a bill. Do the columns line up with the tables?
- [ ] In the Sheet, try a Legal and ID paper. Does TRUE tick the checkbox?
- [ ] In the Sheet, paste a paper whose title starts with an equals sign. Paper Trail puts an apostrophe in front so it can't run as a formula. Does the apostrophe show in the cell?

I checked every column list against your real Hub Sheet and Doc. I could not paste into them, so this section is the real test.

After the test

1. Fix START-HERE.html wherever your friend got stuck.
2. Add real screenshots of Claude's own screens (the publish prompt, the link, the permission prompt). I can't see those, so the guide doesn't have them yet.

3. Replace the staged scan screenshots with a real scan from your own Paper Trail. Mine used sample data and a made-up receipt.
4. Tell me what failed and I'll fix the app or the instructions.

COPY AND PASTE FROM HERE

Paper Trail: sales copy

Written in your voice. Don't post any of it until the friend test passes (see `TEST-WITH-A-FRIEND.md`). The camera, phone, and plan questions change what you can promise.

Things only you can fill in are marked **DECIDE**.

Shop listing

Title: Paper Trail: Household Records Kit

Short description (the line under the title): Scan a receipt, bill, or form. Claude reads it, you check it, and it gets filed with the rest of your house papers.

Listing images: `mockups/mockup-1-home.png` first, then 2 through 6 in order. They're 3:4, evergreen and sage.

Price: DECIDE

Sales page

Where did I put that receipt?

You know the pile. The oil change receipt is in the car, and the warranty is a mystery. You'll find it right after you need it.

You don't need a filing cabinet. You need one simple place for it all to land.

Paper Trail is a small app you make yourself

Take a photo of a paper. Claude reads it and fills in the details: the date, the shop, the total, the mileage, what was done. You check it, tap save, and it's filed.

Later, search for "brake" and there it is. Tap your car and see the whole history.

What it does

- **Reads your papers.** Receipts, bills, forms, appointment cards. Take a photo or pick one from your camera roll.

- **You stay in charge.** Nothing is saved until you check it. Anything Claude wasn't sure about is highlighted.
- **Sorts it for you.** 15 types, each with its own color. Car, home, pets, school, health, bills, insurance, and more.
- **Keeps the next date.** The oil change is due in January? It shows up under Coming up.
- **Handles appointments you already booked.** Add the dentist and it sits right there with everything else.
- **Starts you off with ideas.** 66 quick add ideas, so you're never staring at a blank screen.
- **Finds things fast.** Search, filter, or tap one car or person or pet to see their whole history.
- **Sends papers to your Household Hub.** Own the Hub? One tap copies a paper as a row for the matching table.
- **Saves a spreadsheet.** Take it to your accountant or your insurance agent.

How it works

1. Unzip the folder.
2. Open it in Claude Code and type "Set up Paper Trail."
3. Open your link, and scan your first paper.

That's it. The guide in the folder walks you through each step.

Your copy lives in your own Claude account. I can't see your records, and nobody else can either.

What you need

- A Claude account that can publish artifacts.
- Claude Code (the desktop app is the easiest way to start).
- About 10 minutes.

DECIDE: after the friend test, say exactly which Claude plans work.

Each scan uses a little of your own Claude usage.

What it doesn't do (yet)

- It doesn't send phone alerts. Reminders show up under Coming up when you open the app, and Copy reminder lets you paste one into your calendar.
- It reads photos and screenshots, not PDFs.

- It's not in the App Store. It lives in your Claude account.

What's in the kit

- Paper Trail (the app file)
- A start-here guide
- The setup instructions Claude follows for you
- A paste-in prompt in case Claude needs a nudge
- The rules, in plain words

DECIDE: "Free updates" or not. If yes, say it here.

Questions

Is this an app I download? It's an app you make in a few minutes from the kit. It lives in your Claude account, and you open it with a link.

Do I need to be techy? DECIDE after the friend test: only keep this answer if your tester got through it without help. No. If you can unzip a folder and type one sentence, you can do it. The guide shows each step.

Where do my papers go? Into your own Claude account. I never see them.

Can my family use it? Yes. You can invite people into your copy so everyone sees the same records. What the Share menu offers depends on your Claude plan.

Does it cost anything to run? No monthly fee from me. Scans use a little of your own Claude usage.

What if it breaks? Reach out through wendaful.com and I'll help you sort it out.

Refunds? DECIDE: link your shop's policy.

Instagram carousel

Default format with a DM keyword. ManyChat sends the link.

1. **Hook:** Where did I put that receipt?
2. The oil change receipt is in the car. The warranty is a mystery.
3. So I made a place for it all to land.

4. Snap the paper. Claude reads the date, the shop, the total, and what was done.
5. You check it. Anything unsure gets highlighted. Then you save.
6. Next oil change due? It shows up under Coming up.
7. Dentist already booked? Add it, and it sits with everything else.
8. **CTA:** Comment PAPER and I'll send you the link.

Caption: Your house papers don't need a filing cabinet. They need one place to land. Paper Trail reads the receipt for you, and you just check it. Comment PAPER and I'll send you the link.

Reel

Hook (first 3 seconds, text on screen): Watch me file this receipt.

Show:

1. Take the photo of the receipt.
2. The details fill in. Point at the highlighted one: "It's not sure about this, so I check it."
3. Tap save. Then search the shop name and it pops up.

Voice or text over the top: I used to keep every receipt "somewhere safe." Now I take one photo and Claude reads it. I check it, save it, and I can find it later.

CTA: Comment PAPER and I'll send you the link.

Use your own recording of a real scan for this one, not the mockups.

Email to your list

Subject: A place for your house papers

Preview text: One photo, and the details fill themselves in.

Hi friend,

Quick question. Where's your last oil change receipt?

I made something for the pile. It's called Paper Trail. You take a photo of a receipt, a bill, or a form. Claude reads it and fills in the date, the shop, the total, and what was done. You check it and tap save.

Later, you can search for it, or tap your car and see the whole history. It even keeps the next due date, so you see it under Coming up.

You set it up yourself in about 10 minutes, and it lives in your own Claude account. I never see your papers.

[Get Paper Trail]

If you try it, tell me what you scan first. I'm curious.

Wenda

FOR THE HOUSEHOLD HUB BUNDLE

Where does each paper go?

Page copy for the Run Your Home bundle, plus a short carousel. Written in your voice. It explains how Paper Trail and the Household Hub work together.

Don't post it until you've pasted a row into the real Sheet and Doc. `TEST-WITH-A-FRIEND.md` has the steps (section 9). Pasting into the Sheet should spread across the columns. Pasting into the Doc may not, so check that one first.

Things only you can fill in are marked **DECIDE**.

Page copy

Paper Trail catches the papers. The Hub keeps what stays put.

A paper shows up. A receipt, a vet bill, a warranty card. It needs a home.

Paper Trail is where new papers land. You take a photo, Claude reads it, and it's filed.

The Household Hub is where you keep what you want to find fast. Things like the VIN, the vaccine dates, and the warranty that runs out in March.

Each one has its own job, so nothing lives in two places by accident. And you don't have to send every paper over. Send the ones you'd want your partner, a sitter, or future you to find in a hurry.

How to send a paper to the Hub

1. Open the paper in Paper Trail.
2. Tap **Add to Household Hub**. Pick Google Sheet or Google Doc.
3. Tap **Copy row**, then paste it into the table it points to.

The row comes out in the same column order as the Hub's table, so it drops right in. Every box also has its own Copy button, in case you'd rather paste one at a time.

Where each paper goes

Paper Trail type	In the Hub Sheet	In the Hub Doc
Car	Vehicles tab, the repair and service log	Auto, the service table
Pet	Pets tab, the vet and vaccine log	Pet Care, Vet Appointments and Vaccination Records
Health	Health & Safety tab, Receipts (Appointments when there's no total)	Medical, Receipts (Appointments when there's no total)
Dental and vision	Health & Safety tab, the Dental or Vision table	Medical, the Dental or Vision table
Home	Home tab, Repair History	Home, Household Contacts
Purchases and warranties	Documents & Digital tab, Warranties & Receipts	Confidential, Warranties/Receipts
Bills and utilities	Money tab, Bills	Financial, Bills
Insurance	Money tab, Policies	Insurance
Banking and loans	Money tab, Bank Accounts	Financial, Accounts
Taxes	Money tab, Return Log	Taxes, Return Log
Legal and ID	Documents & Digital tab, Papers Checklist	Legal, Location of Important Papers
School and activities	Our People tab, Extracurricular Activities	Family, Extracurricular Activities
Travel	Everyday Life tab, Upcoming Events	Social, Upcoming Events
Business	Money tab, Expense Tracker	Financial, Expense Tracker
Other	Final Wishes tab, Where Things Are	If Something Happens, Where Things Are

A booked appointment goes to Appointments (health and dental) or Upcoming Events (everything else).

The Vision and Dental tables have a column for each person, so those papers copy as a column. **Copy column** puts the values on separate lines, and you paste them under that person's name. Health and dental papers can also go to Receipts or Appointments, so there's a row of choices on the paper.

What it looks like

Say you scan an oil change receipt. Paper Trail files it, and **Add to Household Hub** hands you this row for the car's service log:

Date	Service or Repair	Mileage	Cost	Shop	Notes
2026-10-02	Synthetic oil change, Oil filter, Tire rotation	48210	$79.99	Quick Lube on Main	Next oil change at 53,000 mi, due Jan 10, 2027

Which papers are worth sending?

Send the ones someone else might need in a hurry: service logs, vaccine dates, warranties, policy numbers. Leave the electric bill where it is. It's already filed.

DECIDE: how you sell the pair. Bundle, a discount when someone has both, or the Hub as a "next step" after Paper Trail.

Carousel (6 slides)

1. **Hook:** Where does this paper go?
2. Paper Trail catches new papers. The Household Hub keeps what stays put.
3. Scan the receipt. Claude fills in the details. You check and save.
4. Want it in the Hub too? Tap **Add to Household Hub**.
5. Copy the row. Paste it into the matching table.
6. **CTA:** Comment HUB and I'll send you both.

Caption: A paper shows up and you think, where does this go? Paper Trail catches it. The Hub keeps the stuff you want to find fast. Comment HUB and I'll send you the details.

What's built, and what isn't

- **Built:** a button on every paper in Paper Trail that copies it as a row for the right Hub table, for both the Sheet and the Doc.
- **Not built:** anything that writes into your Hub for you. You paste. A live connection to Google is possible, but it needs every buyer to connect Google to Claude, and a bad write could damage their Hub.
- **Checked:** every column list in the button matches a table in your real Hub Sheet or Doc, in the same order. I checked it against both files.
- **Not checked:** pasting into the real Sheet and Doc. I can't do that from here.
